

1    **Abstract of Disclosure**

2    A selective one-way bit-driving apparatus includes a shaft for connection  
3    with a handle, a bit receiver including a plurality of teeth formed on an  
4    internal face, two one-way drivers pivotally connected with the shaft and  
5    each formed with a plurality of teeth for engagement with the teeth of the  
6    bit receiver and a switch installed on the shaft for causing the engagement  
7    of the teeth of at least one of the one-way drivers with the teeth of the bit  
8    receiver.
